Project Design Phase-I
Problem – Solution Fit Template

Date	26 oct 2022
Team ID	xxxxxx
Project Name	Olympics games historical data analytics
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ❑ Solve complex problems in a way that fits the state of your customers.
- ❑ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ❑ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ❑ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ❑ **Understand the existing situation in order to improve it for your target group.**

Template:

*1 . CUSTOMER SEGMENT(S) [CS]: Sports analysts, research students, Olympic enthusiasts, and historical data hobbyists who need quick access to sports trends without manual data sorting.

* 2. JOBS TO BE DONE / PROBLEMS [J&P]: Filtering massive datasets by country and year to evaluate historical patterns, calculate overall medal distributions, and analyze athlete statistics across decades.

* 3. TRIGGERS [TR]: Preparations for upcoming sports events, academic research assignments on global sports trends, or a sudden curiosity about specific past Olympic timelines.

* 4. EMOTIONS: BEFORE / AFTER [EM]:

• Before: Overwhelmed, frustrated, and slow due to scanning massive, scattered text files.

• After: Confident, efficient, and satisfied seeing clean visual trends appear instantly in a few clicks.

* 5. CUSTOMER CONSTRAINTS [CC]: Limited programming knowledge to run complex queries, strict deadlines for generating reports, and limited desktop device memory to open millions of raw records simultaneously.

* 6. PROBLEM ROOT CAUSE [RC]: Olympic archives are kept in separate, isolated data stores that lack dynamic filters or modern visual cross-referencing interfaces.

* 7. BEHAVIOUR [BE]: Users regularly search through complex tabular databases, copy-pasting numbers to draw crude charts manually in order to discover historical peaks.

* 8. AVAILABLE SOLUTIONS [AS]: Raw static Kaggle spreadsheet lists, dense text-heavy official historical encyclopedia archives, or premium third-party paid sports analytical platforms.

* 9. CHANNELS OF BEHAVIOUR [CH]:

• Online: Navigating data repositories, reading forums, and utilizing online spreadsheets.

• Offline: Reading physical encyclopedias, sports almanacs, or watching archival television broadcasts.

* 10. [SL]: An interconnected 7-sheet data architecture paired with 2 interactive, cloud-hosted visualization dashboards featuring built-in audio guides for comprehensive filtering.
