SMARTBRIDGE
Let's Bridge the Gap

Project Initialization and Planning Phase

Date	22 oct 2026
Team ID	xxxxxx
Project Title	Olympics games historical data analytics
Maximum Marks	3 Marks

Project Proposal (Proposed Solution) template

This project proposal outlines a solution to address a specific problem. With a clear objective, defined scope, and a concise problem statement, the proposed solution details the approach, key features, and resource requirements, including hardware, software, and personnel.

Project Overview	
Objective	To analyze historical Olympics Games data to uncover deep insights, performance trends of various countries, medal distributions, and the evolution of sports over the years.
Scope	• Structuring historical Olympics data into 7 dedicated relational sheets (e.g., Countries, Athletes, Medals, Years, Sports, and Event Dynamics). • Cleaning and transforming raw data to build 2 interactive visualization dashboards (Overview Dashboard & Detailed Performance Dashboard). • Providing dynamic filtering capabilities based on Country and Year for end-users.
Problem Statement	
Description	Historical Olympics data is massive, unstructured, and scattered across various sources. This makes it challenging for sports analysts, researchers, and enthusiasts to easily track historical medal trends, compare multi-nation performances, or study individual athlete growth over time.
Impact	Visualizing and streamlining this scattered data will significantly reduce analytical friction. Users can easily discover performance patterns and historical milestones across decades of Olympic history with just a few clicks, without needing any complex data science background.

Proposed Solution	
Approach	Utilizing a relational data model to break down comprehensive historical data into 7 interconnected lookup sheets. Building a 2-dashboard system using robust data tools (Google Sheets/Excel and Looker Studio/Power BI) to deliver both global summaries and hyper-focused performance views.
Key Features	• 7-Sheet Structured Data Architecture: Clean, interlinked data modules for hassle-free updates and querying. • Dual Interactive Dashboards: Seamless navigation between high-level summaries and deep performance indicators. • Dynamic Multi-Level Filters: Instant data drilling based on specific Years, Countries, and Sporting Events. • Voice Recording Integration: Integrated audio commentary/guided walkthroughs for an enhanced user experience.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	Quad-Core CPU (	Intel Core i5/i7 or AMD Ryzen 5/7 equivalent).
Memory	8 GB	for handling heavy data transformations and smooth dashboard rendering.
Storage	256 GB SSD	for application hosting, file storage, and operating logs
Software		
Frameworks	Python frameworks , Microsoft Excel / Google Sheets infrastructure (Data Management) and Looker Studio / Power BI web frameworks (Visualization).	e.g., Flask
Libraries	Built-in Spreadsheet Functions (VLOOKUP, XLOOKUP,	

	INDEX-MATCH) and standard data analytics parsing logic.	
Development Environment	Google Workspace Environment	(Drive, Docs, Sheets) / MS Office Suite.
Data		
Data	.csv,.xlsx file	e.g., Kaggle dataset, 10,000 images
