## Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

## Sample Solution Architecture Diagram:

**Component Description Table**

| Component Name | Description / Role in Architecture | Technology Used |
|---|---|---|
| Data source | Raw historical datasets containing comprehensive Olympic records of countries, athletes, medals, events, and years. | Kaggle / Official Olympics Archive (.csv / .xlsx formats) |
| Analytics / BI Layer | Calculating total medal tallies, calculating country performance metrics, KPIs, and organizing trends over specific years. | Looker Studio Data Layer / Spreadsheet Pivot Tables & Aggregations |
| Reporting / Visualization | Displaying the generated insights through 2 comprehensive dashboards (Overview Summary & Detailed Analysis). | Looker Studio Dashboards / Interactive Charts & Dynamic Filters |
